Get to know the CyberAId Project

CyberAId will significantly enhance the cyber-resilience of European Critical Infrastructures (CIs) based on the development and deployment of a novel agentic AI infrastructure that will be used to intelligently coordinate and orchestrate a pool of state-of-the-art cybersecurity tools and services that address the secure deployment and operation of key digital technologies.

Pilots

1. Tiered Client Impersonation Detection for Private Banking and Trading Systems
2. Advanced Anti-Money Laundering Detection for Payment Service Providers
3. AI-Enhanced Anomaly Detection and Incident Response for Banking Cybersecurity
4. Cyber-Resilient AI-Powered Threat Detection and Risk Modelling for High-Frequency Trading

Key Cybersecurity Innovation Areas

- ✓ **CyberAId-BLUEPRINTS**
- ✓ **CyberAId-PROACTIVE**
- ✓ **CyberAId-REPORT**
- ✓ **CyberAId-MONITOR**

CyberAId pays emphasis to the ever-important complementary assets that amplify the benefits of cybersecurity technologies, including innovative security processes, training and capacity building.

Project's Objectives

- ① **CyberAId-Blueprints:** Reference Architecture and Blueprints for Multi-Aspect Cyber-Security in the Financial Sector
- ② **CyberAId-Proactive:** Proactive Vulnerability Management and Data Protection.
- ③ **CyberAId-Monitor:** Real-Time Monitoring, Detection and Response.
- ④ **CyberAId-Report:** Vulnerability Management and Incident Report.
- ⑤ **CyberAId-Pilots:** Validate and Evaluate CyberAId Solutions in Real-Life Multi-Facet Use.
- ⑥ **CyberAId-Platform:** Integrated Platform and Learning Center for Cybersecurity and Resilience in the Financial Industry
